

MySQL is a popular open-source relational database management system known for its ease of use and scalability. Sometimes, you will need a little help while working on a project. That's why we created this MySQL Cheat Sheet.

Instructions for installing MySQL are available at:  
<https://dev.mysql.com>

## CONTENTS

|   |    |
|---|----|
| CONNECTING TO A MYSQL SERVER .....        | 2  |
| CREATING AND DISPLAYING DATABASES .....   | 2  |
| CREATING TABLES .....                     | 3  |
| MODIFYING TABLES .....                    | 4  |

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## CONNECTING TO A MYSQL SERVER

Connect to a MySQL server with a username and a password using the mysql command-line client.

MySQL will prompt for the **password**:

```
mysql -u [username] -p
```

To connect to a **specific database** on a MySQL server using a username and a password:

```
mysql -u [username] -p [database]
```

To **export data** using the mysqldump tool:

```
mysqldump -u [username] -p \  
[database] > data_backup.sql
```

To exit the client:

```
quit or exit
```

For a full list of commands:

```
help
```

## CREATING AND DISPLAYING DATABASES

To create a database:

```
CREATE DATABASE zoo;
```

To list all the databases on the server:

```
SHOW DATABASES;
```

To use a specified database:

```
USE zoo;
```

To delete a specified database:

```
DROP DATABASE zoo;
```

To list all tables in the database:

```
SHOW TABLES;
```

To get information about a specified table:

```
DESCRIBE animal;
```

It outputs column names, data types, default values, and more about the table.

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## CREATING TABLES

To create a table:

```
CREATE TABLE habitat (  
  id INT,  
  name VARCHAR(64)  
);
```

Use AUTO\_INCREMENT to increment the ID automatically with each new record. An AUTO\_INCREMENT column must be defined as a primary or unique key:

```
CREATE TABLE habitat (  
  id INT PRIMARY KEY AUTO_INCREMENT,  
  name VARCHAR(64)  
);
```

To create a table with a foreign key:

```
CREATE TABLE animal (  
  id INT PRIMARY KEY AUTO_INCREMENT,  
  name VARCHAR(64),  
  species VARCHAR(64),  
  age INT,  
  habitat_id INT,  
  FOREIGN KEY (habitat_id)  
  REFERENCES habitat(id)  
);
```

This Cheat Sheet was prepared by [LearnSQL.com](https://learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## MODIFYING TABLES

Use the ALTER TABLE statement to modify the table structure.

To change a table name:

```
ALTER TABLE animal RENAME pet;
```

To add a column to the table:

```
ALTER TABLE animal  
ADD COLUMN name VARCHAR(64);
```

To change a column name:

```
ALTER TABLE animal  
RENAME COLUMN id TO identifier;
```

To change a column data type:

```
ALTER TABLE animal  
MODIFY COLUMN name VARCHAR(128);
```

To delete a column:

```
ALTER TABLE animal  
DROP COLUMN name;
```

To delete a table:

```
DROP TABLE animal;
```

This Cheat Sheet was prepared by [LearnSQL.com](https://learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## QUERYING DATA

To select data from a table, use the SELECT command.

An example of a single-table query:

```
SELECT species, AVG(age) AS average_age
FROM animal
WHERE id != 3
GROUP BY species
HAVING AVG(age) > 3
ORDER BY AVG(age) DESC;
```

An example of a multiple-table query:

```
SELECT city.name, country.name
FROM city
[INNER | LEFT | RIGHT] JOIN country
  ON city.country_id = country.id;
```

Use +, -, \*, / to do some basic math.

To get the number of seconds in a week:

```
SELECT 60 * 60 * 24 * 7; -- result: 604800
```

This Cheat Sheet was prepared by [LearnSQL.com](https://learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## AGGREGATION AND GROUPING

- **AVG**(expr) – average value of expr for the group.
- **COUNT**(expr) – count of expr values within the group.
- **MAX**(expr) – maximum value of expr values within the group.
- **MIN**(expr) – minimum value of expr values within the group.
- **SUM**(expr) – sum of expr values within the group.

To count the rows in the table:

```
SELECT COUNT(*)  
FROM animal;
```

To count the non-NULL values in a column:

```
SELECT COUNT(name)  
FROM animal;
```

To count unique values in a column:

```
SELECT COUNT(DISTINCT name)  
FROM animal;
```

## GROUP BY

To count the animals by species:

```
SELECT species, COUNT(id)  
FROM animal  
GROUP BY species;
```

To get the average, minimum, and maximum ages by habitat:

```
SELECT habitat_id, AVG(age),  
           MIN(age), MAX(age)  
FROM animal  
GROUP BY habitat_id;
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## INSERTING DATA

To insert data into a table, use the INSERT command:

```
INSERT INTO habitat VALUES  
(1, 'River'),  
(2, 'Forest');
```

You may specify the columns in which the data is added. The remaining columns are filled with default values or NULLs.

```
INSERT INTO habitat (name) VALUES  
( 'Savanna' );
```

## UPDATING DATA

To update the data in a table, use the UPDATE command:

```
UPDATE animal  
SET  
    species = 'Duck',  
    name = 'Quack'  
WHERE id = 2;
```

## DELETING DATA

To delete data from a table, use the DELETE command:

```
DELETE FROM animal  
WHERE id = 1;
```

This deletes all rows satisfying the WHERE condition.

To delete all data from a table, use the TRUNCATE TABLE statement:

```
TRUNCATE TABLE animal;
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## CASTING

From time to time, you need to change the type of a value. Use the `CAST()` function to do this.

In MySQL, you can cast to these data types:

|          |        |        |      |              |
|----------|--------|--------|------|--------------|
| CHAR     | NCHAR  | BINARY | DATE | DATETIME     |
| DECIMAL  | DOUBLE | FLOAT  | REAL | SIGNED       |
| UNSIGNED | TIME   | YEAR   | JSON | spatial_type |

To get a number as a signed integer:

```
SELECT CAST(1234.567 AS signed);  
-- result: 1235
```

To change a column type to double:

```
SELECT CAST(column AS double);
```

## TEXT FUNCTIONS

### FILTERING THE OUTPUT

To fetch the city names that are not Berlin:

```
SELECT name
FROM city
WHERE name != 'Berlin';
```

### TEXT OPERATORS

To fetch the city names that start with a 'P' or end with an 's':

```
SELECT name
FROM city
WHERE name LIKE 'P%' OR name LIKE '%s';
```

To fetch the city names that start with any letter followed by 'ublin' (like Dublin in Ireland or Lublin in Poland):

```
SELECT name
FROM city
WHERE name LIKE '_ublin';
```

### CONCATENATION

Use the CONCAT() function to concatenate two strings:

```
SELECT CONCAT('Hi ', 'there!');
-- result: Hi there!
```

If any of the string is NULL, the result is NULL:

```
SELECT CONCAT(Great ', 'day', NULL);
-- result: NULL
```

MySQL allows specifying a separating character (separator) using the CONCAT\_WS() function. The separator is placed between the concatenated values:

```
SELECT CONCAT_WS(' ', 1, 'Olivier', 'Norris'); --
result: 1 Olivier Norris
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## OTHER USEFUL TEXT FUNCTIONS

To get the count of characters in a string:

```
SELECT LENGTH('LearnSQL.com');  
-- result: 12
```

To convert all letters to lowercase:

```
SELECT LOWER('LEARNSQL.COM');  
-- result: learnsql.com
```

To convert all letters to uppercase:

```
SELECT UPPER('LearnSQL.com');  
-- result: LEARNSQL.COM
```

To get just a part of a string:

```
SELECT SUBSTRING('LearnSQL.com', 9);  
-- result: .com  
SELECT SUBSTRING('LearnSQL.com', 1, 5);  
-- result: Learn
```

To replace a part of a string:

```
SELECT REPLACE('LearnSQL.com', 'SQL', 'Python');  
-- result: LearnPython.com
```

This Cheat Sheet was prepared by [LearnSQL.com](https://learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## NUMERIC FUNCTIONS

To get the remainder of a division:

```
SELECT MOD(13, 2); -- result: 1
```

To round a number to its nearest integer:

```
SELECT ROUND(1234.56789); -- result: 1235
```

To round a number to three decimal places:

```
SELECT ROUND(1234.56789, 3);  
-- result: 1234.568
```

To round a number up:

```
SELECT CEIL(13.1); -- result: 14  
SELECT CEIL(-13.9); -- result: -13
```

The CEIL(x) function returns the smallest integer not less than x. To round the number down:

```
SELECT FLOOR(13.8); -- result: 13  
SELECT FLOOR(-13.2); -- result: -14
```

The FLOOR(x) function returns the greatest integer not greater than x. To round towards 0 irrespective of the sign of a number:

```
SELECT TRUNCATE(13.56, 0); -- result: 13  
SELECT TRUNCATE(-13.56, 1); -- result: -13.5
```

To get the absolute value of a number:

```
SELECT ABS(-12); -- result: 12
```

To get the square root of a number:

```
SELECT SQRT(9); -- result: 3
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## USEFUL NULL FUNCTIONS

To fetch the names of the cities whose rating values are not missing:

```
SELECT name
FROM city
WHERE rating IS NOT NULL;
```

### COALESCE(x, y, ...)

To replace NULL in a query with something meaningful:

```
SELECT domain,
       COALESCE(domain, 'domain missing')
FROM contacts;
```

The COALESCE() function takes any number of arguments and returns the value of the first argument that is not NULL.

### NULLIF(x, y)

To save yourself from *division by 0* errors:

```
SELECT last_month, this_month,
       this_month * 100.0
       / NULLIF(last_month, 0)
       AS better_by_percent
FROM video_views;
```

The NULLIF(x, y) function returns NULL if x equals y, else it returns the value of x value.

## DATE AND TIME

There are 5 main time-related types in MySQL:

DATE    TIME    DATETIME    TIMESTAMP    YEAR

**DATE** – stores the year, month, and day in the YYYY-MM-DD format.

**TIME** – stores the hours, minutes, and seconds in the HH:MM:SS format.

**DATETIME** – stores the date and time in the YYYY-MM-DD HH:MM:SS format. The supported range is '1000-01-01 00:00:00' to '9999-12-31 23:59:59'.

**TIMESTAMP** – stores the date and time. The range is '1970-01-01 00:00:01' UTC to '2038-01-19 03:14:07' UTC. MySQL converts **TIMESTAMP** values from the current time zone to UTC for storage, and back from UTC to the current time zone for retrieval.

**YEAR** – stores the year in the YYYY format.

## INTERVALS

An interval is the duration between two points in time.

To define an interval: **INTERVAL 1 DAY**

This syntax consists of the **INTERVAL** keyword, a value, and a time part keyword (**YEAR**, **QUARTER**, **MONTH**, **WEEK**, **DAY**, **HOUR**, **MINUTE**, **SECOND**, **MICROSECOND**).

You may combine different **INTERVALS** using the + or – operator:

**INTERVAL 1 YEAR + INTERVAL 3 MONTH**

You may also use the standard SQL syntax:

**INTERVAL '1-3' YEAR\_MONTH**

-- 1 year and 3 months

**INTERVAL '3-12' HOUR\_MINUTE**

-- 3 hours 12 minutes

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## WHAT TIME IS IT?

To answer this question, use:

- `CURRENT_TIME` or `CURTIME` – to get the current time.
- `CURRENT_DATE` or `CURDATE` – to get the current date.
- `NOW()` or `CURRENT_TIMESTAMP` – to get the current timestamp with both of the above.

## CREATING VALUES

To create a date, time, or datetime, write the value as a string and cast it to the proper type.

```
SELECT CAST('2021-12-31' AS date),  
       CAST('15:31' AS time),  
       CAST('2021-12-31 23:59:29' AS datetime);
```

You may skip casting in simple conditions; the database knows what you mean.

```
SELECT airline, flight_no, departure_time  
FROM airport_schedule  
WHERE departure_time < '12:00';
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

## EXTRACTING PARTS OF DATES

To extract a part of a date, use the functions YEAR, MONTH, WEEK, DAY, HOUR, and so on.

```
SELECT YEAR(CAST('2021-12-31' AS date));
```

```
-- result: 2021
```

```
SELECT MONTH(CAST('2021-12-31' AS date));
```

```
-- result: 12
```

```
SELECT DAY(CAST('2021-12-31' AS date));
```

```
-- result: 31
```

## DATE ARITHMETICS

To add or subtract an interval from a DATE, use the ADDDATE () function:

```
ADDDATE('2021-10-31', INTERVAL 2 MONTH);
```

```
-- result: '2021-12-31'
```

```
ADDDATE('2014-04-05', INTERVAL -3 DAY);
```

```
-- result: '2014-04-02'
```

To add or subtract an interval from a TIMESTAMP or DATETIME, use the TIMESTAMPADD() function:

```
TIMESTAMPADD(MONTH, 2,  
'2014-06-10 07:55:00');
```

```
-- result: '2014-08-10 07:55:00'
```

```
TIMESTAMPADD(MONTH, -2,  
'2014-06-10 07:55:00');
```

```
-- result: '2014-04-10 07:55:00'
```

This Cheat Sheet was prepared by [LearnSQL.com](https://www.learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

To add or subtract TIME from a DATETIME, use the ADDTIME () function:

```
ADDTIME('2018-02-12 10:20:24', '12:43:02');  
-- result: '2018-02-12 23:03:26'  
ADDTIME('2018-02-12 10:20:24', '-12:43:02');  
-- result: '2018-02-11 21:37:22'
```

To find the difference between two dates, use the DATEDIFF () function:

```
DATEDIFF('2015-01-01', '2014-01-02');  
-- result: 364
```

To find the difference between two times, use the TIMEDIFF () function:

```
SELECT TIMEDIFF('09:30:00', '07:55:00');  
-- result: '01:35:00'
```

To find the difference between two datetimes (in a given unit of time), use the TIMESTAMPDIFF () function. Here's an example with the difference given in weeks:

```
SELECT TIMESTAMPDIFF(  
    WEEK, '2018-02-26', '2018-03-21'  
); -- result: 3
```

This Cheat Sheet was prepared by [LearnSQL.com](https://learnsql.com) as a part of its SQL training program. Check out other [SQL Cheat Sheets](#).

Learn it all at [LearnSQL.com](https://LearnSQL.com)
